

# System of operational agricultural management and cost planning

**LBR.IT**  
Desenvolvimento e Comercialização de Softwares

**AgriX is software for agricultural management and an independent and complete solution that adapts to all ERPs in the market.**

**In crop management, this solution is a powerful tool that helps the producer to optimize their cultivation, with full integration between harvest planning, warehouse purchase, and field notes. It brings total tranquility to agricultural operational planning. The final quantities and inputs per field are easily defined, and all crops and operations cycles are efficiently controlled.**

**This is the best technology that your farm needs, in one place. In a fast and effective way, AgriX brings to the producer possibilities such as highly professional agricultural management, estimated versus paid cost analysis, productivity projection, and a lot more.**

**MAIN NOTES:**

- Agricultural planning
- Estimated x paid cost analysis
- Harvest costing
- Harvest result
- Input planning
- Fuel planning
- Variety planning
